9.	Appendix B Graduate Parameters as defined by National Board of Accreditation	75
10.	Appendix C Bloom’s Taxonomy	77

VISION

To evolve into a centre of excellence in Electrical and Electronics Engineering for bringing out contemporary engineers, innovators, researchers and entrepreneurs for serving nation and society.

MISSION

- To provide suitable forums to enhance the teaching-learning, research and development activities.
- Framing and continuously updating the curriculum to bridge the gap between industry and academia in the contemporary world and serve society.
- To inculcate awareness and responsibility towards the environment and ethical values.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1	To provide good learning environment to develop entrepreneurship capabilities in various areas of Electrical and Electronics Engineering with enhanced efficiency, productivity, cost effectiveness and technological empowerment of human resource.
PEO2	To inculcate research capabilities in the areas of Electrical and Electronics Engineering to identify, comprehend and solve problems and adopt themselves to rapidly evolving technology.
PEO3	To create high standards of moral and ethical values among the graduates to transform them as responsible citizens of the nation.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO 1	Graduates will be able to solve real life problems of power system and power Electronics using MiPower, PSPICE and MATLAB software tools and hardware.
PSO 2	Graduates will be able to Develop & support systems based on Renewable and sustainable Energy sources.

PEOs TO MISSION STATEMENT MAPPING

Mission Statements	PEO1	PEO2	PEO3
PEO1: To provide good learning environment to develop entrepreneurship capabilities in various areas of Electrical and Electronics Engineering with enhanced efficiency, productivity, cost effectiveness and technological empowerment of human resource.	3	3	1
PEO2: To inculcate research capabilities in the areas of Electrical and Electronics Engineering to identify, comprehend and solve problems	2	3	2

and adopt themselves to rapidly evolving technology			
PEO3: To create high standards of moral and ethical values among the graduates to transform them as responsible citizens of the nation.	1	2	3

Correlation: 3- High, 2-Medium, 1-Low

PROGRAM OUTCOMES (POs) WITH GRADUATE ATTRIBUTES

S.No	Graduate Attributes	Program Outcomes (POs)
1	Engineering Knowledge	PO1: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2	Problem Analysis	PO2: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3	Design and Development of Solutions	PO3: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4	Conduct investigations of complex problems	PO4: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5	Modern Tool usage	PO5: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6	The Engineer and society	PO6: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7	Environment and sustainability	PO7: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8	Ethics	PO8: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9	Individual and team work	PO9: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10	Communication	PO10: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design

		documentation, make effective presentations, and give and receive clear instructions.
11	Project management and finance	PO11: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12	Lifelong learning	PO12: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

SPECIAL ELECTRICAL MACHINES

Course Code : 20EEE71A

Credits : 3

L: T: P:S : 3:0:0 :0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Acquire knowledge about construction and working principles of special electrical machines.
CO2	Analyze the performance of special electrical machines.
CO3	Acquire knowledge on various types of controllers for special motors
CO4	Understand the linear and nonlinear characteristics of special electrical machines.
CO5	Evaluate and formulate the EMF and torque equations.
CO6	Choose appropriate special machines based on applications.

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	2	3	2	2	1	1	1	1	3

RELAY AND HIGH VOLTAGE ENGINEERING

Course Code : 20EEE72A

Credits : 03

L: T: P:S : 3:0:0 :0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Understand the different breakdown mechanisms of dielectrics
CO2	Study the different generation and measurement techniques of high voltage
CO3	Apply different techniques for the testing of high voltage apparatus
CO4	Evaluate the characteristics of different protection relays and different types of electromagnetic relay.
CO5	Acquire the knowledge on digital relays
CO6	Apply the high voltage knowledge on real time applications

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO6	3	2	3	3	2	1	2	1	1	1	1	1

Module No	Module Contents	Hours	COs
1	Break Down in Gaseous , Liquid and solid Dielectrics Gases as insulating media, collision process, Ionization process, Townsend's criteria of breakdown in gases, Paschen's law. Suspended Solid Particle Mechanism, Cavity breakdown Intrinsic breakdown, electromechanical breakdown, thermal breakdown.	09	CO1
2	Generation and Measurement of high voltages and High currents Generation of High Direct Current Voltages, Generation of High alternating voltages, Generation of Impulse voltages, Generation of Impulse currents, Tripping and control of impulse generators. Measurement of High Direct Current voltages, Measurement of High Voltages alternating and impulse.	09	CO2
3	High Voltage Tests ,Non-Destructive Insulation Test Techniques Measurement of D. C. Resistivity, Measurement of Dielectric Constant and loss factor, Partial discharge measurements, Testing of Insulators and circuit breakers, testing of cables, Testing of Transformers, Testing of Surge Arresters.	09	CO3
4	Protective and Distance Relays Basic requirement of protective relaying, Zones of protection , Over Current relay- IDMT relays, PSM, TSM, problems, directional and non-directional relays ,negative sequence relays. Impedance ,Reactance, Mho and off set Mho relays, Characteristic of distance relays and comparison of differential relay-Circulating current and opposite voltage differential scheme, Comparison of static and electromagnetic relay.	09	CO4
5	Digital Relay & Industrial Applications to High Voltage Engineering Introduction to digital relay , microprocessor application to protection, desirable features in a protection scheme, integrated hierarchical computer control and protection Electrostatic applications – Electro static precipitator, Electro static separator, Electro static coating, Electro Static copying, pulsed power.	09	CO5, CO6

ELECTRICAL DRIVES AND VEHICLES

Course Code : 20EEE73A

Credits: 03

L: T: P :S : 3:0:0 :0

CIE Marks: 50

Exam Hours : 03

SEE Marks: 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Understand the dynamics of electrical drives
CO2	Analyze the operation of the Converter and Chopper fed dc drives
CO3	Analyze the operation of the induction and Synchronous Motor AC drive
CO4	Understand various types of motors used in electric vehicles and energy sources
CO5	Analyze various types of electrical drives to meet the requirement of electrical vehicles
CO6	Analyze need of electric vehicle and its environmental impact

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

PROFESSIONAL ELECTIVE-IV

DIGITAL SIGNAL PROCESSING

Course Code : 20EEE741A

L: T: P: S : 3:0:0:0

SEE Marks : 50

Credits : 03

CIE Marks : 50

Exam Hours : 03

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Classify signals and systems & study their mathematical representation.
CO2	Determine the response of LTI systems to any input signal by using convolution.
CO3	Analyse the discrete time signals by Z transforms, DTFS, & DTFT.
CO4	Analyze the discrete time signals by DTFS, & DTFT.
CO5	Determine the spectrum of a signal by using various transformation techniques DFT & FFT.
CO6	Design and digital implementation of IIR, FIR filters using MATLAB.

Mapping of Course Outcomes to Program Outcomes:

FACTS AND HVDC TRANSMISSION

Course Code : 20EEE742A

Credits : 03

L: T: P: S : 3:0:0:0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Learn the concept of power flow control through various power electronic controllers such as FACTS controllers, operational aspects and their capabilities and their integration in power flow analysis
CO2	Learn the method of shunt compensation by using static VAR compensators and their applications
CO3	Understand the working of STATCOM and UPFC.
CO4	Analyze different converter topologies viz. 3, 6 and 12 Pulse converters and understand it's control aspects.
CO5	Analyze different types of DC links and applications of DC transmission.
CO6	Understand the concepts of FACTS controllers and HVDC transmission

Mapping of Course Outcomes to Program Outcomes:

TESTING AND COMMISSIONING OF ELECTRICAL EQUIPMENT

Course Code : 20EEE743A

Credits : 03

L: T: P :S : 3:0:0 :0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Describe the procurement process and the state-of-the art global practices in maintenance of electrical equipment.
CO2	Mention the requirement of electrical equipment
CO3	Understand the specifications in Installation and testing of transformers
CO4	Design the Installation process of induction motors and synchronous machines
CO5	Analyze the testing process of induction motors and synchronous machines
CO6	Choose the appropriate electrical equipment for the real time applications

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	1	2	3	2	-	-	1	2	2

CO3	3	2	2	1	2	3	2	-	-	1	2	2
CO4	3	2	2	1	2	3	2	-	-	1	2	2
CO5	3	2	2	1	2	3	2	-	-	1	2	2
CO6	3	2	2	1	2	3	2	-	-	1	2	2

Module No	Module Contents	Hours	COs
1	PROCUREMENT PROCESS: Tender specifications based on requirement and national, international codes and standards, compiling tender documents & vendor assessment, inviting tenders, scrutiny and evaluation of bids (technical and financial) acceptance and award of contract with necessary safety and security classes.	6	CO1
2	REQUIREMENTS COMMON TO ALL EQUIPMENT: Types of construction, design details and dimensional layout. Types of enclosure (IP code) and cooling system, Insulation class, Physical inspection, handling and storage, Foundation details f) Tests- factory, site and stage wise-inspection and certification. Name plates-code of practice ,Duty cycle and cyclic duration factor, Vibration and noise levels control, Tips for trouble shooting ,Maintenance schedules and assessment of their effectiveness, Documentation of all factory and field test results with equipment and instruction manuals for operation and maintenance.	8	CO2
3	TRANSFORMERS: Specification: Power& distribution transformers as per BIS standard. Acceptance Tests: Type, routine and special tests applicable. Installation: Location, foundation details, conductor/cable termination boxes, bushings, polarity and phase sequence, oil tank and radiators, nitrogen and oil filled trafos, drying of windings and general inspection. Commissioning Tests: Pre-commissioning, tests as per relevant BIS or IEC standards, ratio and polarity, insulation resistance, oil dielectric strength, tap changing gear, fans and pumps for cooling, neutral earthing resistance, buchholz relay, load tests and temperature rise, hot and cold IR value.	12	CO2, CO3, CO6
4	INDUCTION MOTORS: Specifications: For different types of induction motors as per BIS including duty and IP protection. Acceptance Tests: Type, routine and special tests as specified by BIS codes of testing. Installation: Location and details of mounting and foundation, control gear, alignment with driven equipment with coupling, fitting of pulleys, bearings, drying of windings. Commissioning Tests: Pre-commissioning tests, physical examination, alignment and airgap, bearing, balancing and vibration, insulation resistance, no-load run, frame earthing and bearing pedestal insulation, load test and temperature rise, hot and cold IR values.	10	CO4, CO5, CO6
5	SYNCHRONOUS MACHINES: Specifications: As per BIS Standards. Acceptance Tests: Type, routine-and special tests applicable as per BIS. Installation:	9	CO4, CO5, CO6

	Location and details of mounting and foundations, control gear, excitation system and cooling arrangements. Commissioning Tests: Pre-Commissioning tests, physical examination, alignment and air gap, armature and field winding insulation resistance, balancing and vibration, no load run and frame earthing, pedestal insulation, load test and temperature rise, hot and cold IR values.

ENERGY AUDITING AND DEMAND SIDE MANAGEMENT

Course Code : 20EEE744A

Credits : 03

L: T: P:S : 3:0:0:0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Understand the energy situation and need for energy economic analysis.
CO2	Analyse the concept of energy auditing.& need for Electrical System Optimization.
CO3	understand the energy audit instruments
CO4	Apply energy auditing for buildings
CO5	understand the concept of the energy conservation
CO6	Understand the concept of Demand Side Management.

Mapping of Course Outcomes to Program Outcomes:

PROFESSIONAL ELECTIVE-V

UTILIZATION OF ELECTRICAL ENERGY

Course Code : 20EEE751A

L: T: P:S : 3:0:0:0

Exam Hours : 03

Credits : 03

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Obtain the fundamental concept of electric traction
CO2	Design the different lighting system for various requirement
CO3	Understand the concepts of electric welding and heating
CO4	Acquire knowledge in refrigeration and air conditioning system
CO5	Identify the economic aspects of power factor necessity and its improvement methods
CO6	Utilize the electrical energy as per the requirement

Mapping of Course Outcomes to Program Outcomes:

POWER SYSTEM OPERATION AND CONTROL

Course Code : 20EEE752A

Credits : 03

L: T: P:S : 3:0:0:0

CIE Marks : 50

Exam Hours : 3

SEE Marks : 50

Course Outcomes: At the end of the course, the student will be able to:

CO1	Understand the Operating States of Power System and Megawatt-frequency and Megavar-Voltage control loops.
CO2	Model the Generator, Turbine, Governor, Tie-Line and analyze the response of single area and two area systems.
CO3	Analyze the reactive power requirement at a point in system and suggest the compensation.
CO4	Apply Equal Incremental Cost method and allocate optimal generation for generating units in a generating station and apply Unit Commitment Solution Methods and find the Units to be Committed for optimal generation
CO5	Analyze the contingency of a system using Linear Sensitivity Factors and understand the concept of Synchrophasors, Phasor Measurement Unit and Wide Area Monitoring Systems
CO6	Understand the concept of Synchrophasors, Phasor Measurement Unit and Wide Area Monitoring Systems.

Mapping of Course Outcomes to Program Outcomes:

PROFESSIONAL ETHICS

Course Code : 20EEE753A

L: P: T : S : 3:0:0:0

Exam Hours : 03

Credits : 03

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Understand the ethical behavior of an engineer, professional ethics and human values
CO2	Analyze the basic perception of profession, professional ethics, various moral issues and uses of ethical theories
CO3	Understand various social issues, industrial standards, code of ethics and role of professional ethics in engineering field
CO4	Know the responsibilities of an engineer for safety and risk benefit analysis
CO5	Acquire knowledge about various roles of engineers in variety of global issues
CO6	Apply ethical principles to resolve situations in their professional lives

RELAY AND HIGH VOLTAGE ENGINEERING LABORATORY

Course Code : 20EEL76A

Credits : 1.5

L:T: P: S : 0:0:1.5:0

CIE Marks : 25

Exam Hours : 03

SEE Marks : 25

Course Outcomes: At the end of the course, the Student will be able to:

CO1	Experimentally verify the characteristics of over current, over voltage, under voltage and negative sequence relays both electromagnetic and static type
CO2	Analyze the spark over characteristics for both uniform and non-uniform configurations using High AC and DC voltages
CO3	Measure the breakdown strength of transformer oil , electric field and find the capacitance of different electrode configuration models
CO4	Analyzing the Performance of generator and transformer with different techniques

Mapping of Course Outcomes to Program Outcomes:

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	2	-	-	-	2	1	-	-
CO2	3	3	2	2	3	-	-	-	2	1	-	-
CO3	3	3	3	3	3	-	-	-	2	1	-	-
CO4	3	3	3	3	3	-	-	-	2	1	-	-

Exp. No.	Experiments	COs
1	Breakdown characteristics of sphere -sphere gap with HVAC	CO2
2	Breakdown characteristics of sphere -sphere gap with HVDC	CO2
3	Breakdown test of transformer oil	CO2
4	Field mapping using electrolytic tank	CO3
5	Performance of IDMT characteristic for microprocessor based over current relay	CO1
6	Performance of DMT characteristic of solid state under voltage relay	CO1
8	Breakdown characteristics of sphere -point gap with HVAC	CO2

8	Breakdown characteristics of sphere -point gap with HVDC	C02
9	Protection of generator by differential scheme	C04
10	Performance of IDMT characteristic for microprocessor Based under voltage relay	C02
11	Negative sequence relay	C01
12	Protection of transformer by Merz-Price protection scheme	C04

Assessment Pattern:

SIMULATION TOOLS FOR ELECTRICAL ENGINEERING LABORATORY

Course Code : 20EEL77A

Credits : 1.5

L:T: P:S : 0:0:1.5:0

CIE Marks : 25

Exam Hours : 03

SEE Marks : 25

Course Outcomes: At the end of the course, the Student will be able to:

C01	Apply the knowledge to simulate DC and AC circuits
C02	Analyze and simulate the control signals for the requirement
C03	Design the operational amplifier for the integrated circuits
C04	Acquire knowledge on the power electronic converters

Mapping of Course Outcomes to Program Outcomes:

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
C01	3	3	2	2	2	-	-	-	2	1	-	-
C02	3	3	2	2	3	-	-	-	2	1	-	-
C03	3	3	3	3	3	-	-	-	2	1	-	-
C04	3	3	3	3	3	-	-	-	2	1	-	-

Exp. No.	Experiments	COs
1	Simulation of DC circuits	C01
2	Simulation of transient response of RLC Circuit to step,pulse and sinusoidal signals	C01
3	Design and simulation of Lag,Lead and Lag-Lead Compensators	C02
4	Analysis of 3 phase circuit representing the generator transmission line and load.	C02
5	Simulation of integrator and differentiator circuits using Op-AMP	C03
6	Simulation of Comparator circuit using OP-AMP	C03
7	Simulation of Schmitt trigger circuit using OP-AMP	C03
8	Simulation of single-phase full converter using RLE loads and single phase AC voltage controller using RL load	C04
9	Simulation of single phase inveter using PWM control	C04
10	Simulation of power electronic converters	C04
11	Simulation of DC separately excited motor using transfer function.	C04
12	Simulation of Chopper fed DC motor drives	C04

PROFESSIONAL ELECTIVE-VI

ESTIMATION AND COSTING OF ELECTRICAL SYSTEMS

Course Code : 20EEE811A

L: T: P:S : 3:0:0:0

Exam Hours : 03

Credits : 03

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Analyze estimation & costing, Necessity and procedures for estimation and costing, major applicable I.E rules and acts, Types and materials used for wiring
CO2	Understand general rules, guidelines for internal wiring, preparation of detailed estimates and costing of internal wiring, Inspection and testing of wiring installations
CO3	Apply the procedure for service connection, design, estimation and costing of underground and overhead service connections.
CO4	Analyze the Important considerations regarding motor installation wiring, Design and Estimation of components required for Motor installation and costing the same
CO5	Design overhead transmission & distribution lines. Typical AC electrical power system, Estimation & costing of transmission & distribution lines
CO6	Design, estimate and costing of the components of substations and substation Earthing, Remote control wiring

Design and Estimation of components required for Motor installation and costing the same

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	1	2	2	1	1	3	3	3	3

CO3	3	3	2	2	2	2	1	1	3	3	3	3
CO4	3	3	3	2	2	2	1	1	3	3	3	3
CO5	3	3	3	2	2	2	1	1	3	3	3	3
CO6	3	3	3	2	2	2	1	1	3	3	3	3

Module No	Module Contents	Hours	Cos
1	<p>PRINCIPLES OF ESTIMATION & COSTING: Introduction to estimation & costing, Electrical Schedule, Catalogues, Market Survey and source selection, Recording of estimates, Determination of required quantity of material, Determination of cost of material and labour, Contingencies, Overhead charges, Profit, Purchase system, Purchase enquiry and selection of appropriate purchase mode, Comparative statement, Purchase orders, Payment of bills, Tender form, Indian Electricity Act and major applicable I.E rules.</p> <p>WIRING: Introduction, Distribution of energy in a Building, PVC Casing and Capping, Conduit Wiring, Types of cables used in Internal Wiring, Multi Strand Cables, Voltage Grading and Specification of Cables, Main Switch and Distribution Board, Conduits and its accessories and Fittings. Lighting Accessories and Fittings, Types of Fuses, Size of Fuse, Fuse Units, Earthing Conductor.</p>	09	CO1
2	<p>INTERNAL WIRING ESTIMATION: General rules for wiring, Determination of number of points, Total load, number of sub-circuits, Size of conductor, Rating of main switch and distribution board, mounting arrangements and positioning of switchboards, distribution boards main switch etc, Sequence to be followed for preparing estimate, Preparation of detailed estimates and costing of residential installation.</p> <p>INSPECTION AND TESTING OF INSTALLATIONS: Inspection of internal wiring installations, Inspection of new installations, testing of installations, Testing of wiring installations, Reason for excess recording of energy consumption by energy meter.</p>	09	CO2
3	<p>INSTALLATION OF SERVICE CONNECTIONS: Concept of service connection, Types of service connection and their features, Method of installation of service connection, estimation and costing of overhead and underground service connections,</p> <p>ELECTRICAL INSTALLATION FOR POWER CIRCUITS : Introduction, Important considerations regarding motor installation wiring, Determination of input power, Determination of input current to motors, Determination of rating of cables, determination of rating of fuse, Determination of size of Conduit, distribution Board main switch and starter.</p>	09	CO3, CO4
4	<p>ESTIMATION OF OVERHEAD TRANSMISSION & DISTRIBUTION LINES:</p>	09	CO5

	<p>Introduction, Typical AC electrical power system, Main components of overhead lines, Line supports, Factors governing height of pole, Conductor materials, Determination of size of conductor for overhead transmission line, Cross arms, Pole brackets and clamps, Guys and Stays, Conductors configuration spacing and clearances, Span lengths, Overhead line insulators, Insulator materials, Types of insulators, Lightning Arrestors, Phase plates, Danger plates, Anti climbing devices, Bird guards, Beads of jumpers, Muffs.</p> <p>ESTIMATION OF OVERHEAD TRANSMISSION & DISTRIBUTION LINES (CONTINUED):</p> <p>Points to be considered at the time of erection of overhead lines, Erection of supports, Setting of stays, Fixing of cross arms, Fixing of insulators, Conductor erection, Repairing and jointing of conductor , Dead end clamps, Positioning of conductors and attachment to insulators, Jumpers, Tee-offs, Earthing of transmission lines, Guarding of overhead lines, Clearances of conductor from ground, Spacing between conductors, Testing and commissioning of overhead distribution lines, Some important specifications.</p>		
5	<p>DESIGN AND ESTIMATION OF SUBSTATIONS:</p> <p>Introduction, Classification of substation, Indoor substations, Outdoor substations, Selection and location of site for substation, Main Electrical Connections, Graphical symbols for various types of apparatus and circuit elements on substation main connection diagram, Key diagram of typical substations, Equipment for substation and switchgear installations, Substation auxiliaries supply, Substation Earthing.</p> <p>REMOTE CONTROL WIRING:</p> <p>Remote control Switching, Remote control selection considerations, types of control devices, motor control circuits.</p>	09	CO6

Text Books:

1. Electrical Installation Estimating & Costing, J.B.Gupta, S.K. Katria & Sons New Delhi, IX Edition, 2013
2. 1. Electrical Design Estimating and Costing, K.B.Raina S.K.Bhattacharya, New Age International second edition 1st Mar 2017.

Reference Books:

1. Electrical Wiring Estimating and Costing, Uppal, Khanna Publishers Delhi, 2008
2. Electrical Systems Design, M.K.Giridharan, I K International Publishing House Pvt. Ltd 3rd Revised edition 30th November 2015
3. I.E. Rules and Act Manuals.

SMART GRID TECHNOLOGIES

Course Code : 20EEE812A

Credits : 03

L:T: P:S : 3:0:0:0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Understand the concept of Smart Grid, compare with conventional grid, and identify its opportunities and barriers.
CO2	Understand the concept of Smart Meter, Smart Appliances, Plug in Hybrid Electric Vehicles, Vehicle to Grid, Smart Sensors.
CO3	Understand the concept of Substation Automation, Feeder Automation, Intelligent Electronic Devices, Smart storage like Battery.
CO4	Understand the concept of micro grid, distributed energy resources, Power Quality and its issues of Grid connected Renewable Energy Sources, Power Quality Audit.
CO5	Understand the concept of SG stake holders and market drivers
CO6	Understand the concept of Electric vehicles in smart grid

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	1	-	2	-	-	-	-	-	1

POWER QUALITY

Course Code : 20EEE813A

Credits : 03

L: T: P :S : 3:0:0 :0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Describe and Classify power quality issues in a power system and know the standards
CO2	Analyze Voltage sag ,Over voltage and Harmonics problems and suggest preventive techniques
CO3	Identify the DG sources, analyze the power quality issues and operating conflicts when DG is interconnected to the grid
CO4	Solve power quality problems using Power Quality Equipments
CO5	Understand and analyze the functions of Custom Power Devices
CO6	Apply in industries and Power System Engineering

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	1	1	1	1	1	1	-	1	1	1

INTEGRATION OF DISTRIBUTED GENERATION

Course Code : 20EEE814A

Credits : 03

L: T: P :S : 3:0:0:0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Understand and evaluate economic issues and key engineering features and concepts of distributed generation that are used in grid integration
CO2	Able to investigate the operation of renewable energy generators at a systems level and analysis of distributed generation systems.
CO3	Analyze the grid integration issues of renewable generation and its performance of the network
CO4	Understand the converter principles and electronic devices developed for the integration of distributed generations into the grid.
CO5	Determine the different topologies used for grid integration of distributed power generations.
CO6	Understand the different law and economic regulations in distributed generation for the liberalized markets, and to identify the boundaries and opportunities in those fields.

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

PROFESSIONAL ELECTIVE-VI

PHOTO VOLTAIC SYSTEMS AND APPLICATIONS

Course Code : 20EEE821A

L: T: P: S : 3:0:0 :0

Exam Hours : 03

Credits : 03

CIE Marks : 50

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Understand the basics of photovoltaic cells
CO2	Choose appropriate battery charging for different applications
CO3	Develop maximum power point tracking techniques
CO4	Analyze solar irradiation and design an appropriate solar PV system for power generation
CO5	Evaluate and design standalone and grid connected PV systems based on the consumer demand
CO6	Design appropriate PV arrays based on the applications

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	2	2	-	1	-	1	-	1	1
CO2	3	3	3	2	2	-	1	-	1	-	1	1
CO3	3	3	3	2	2	-	1	-	1	-	1	1
CO4	3	3	3	2	2	-	1	-	1	-	1	1
CO5	3	3	3	2	2	-	1	-	1	-	1	1
CO6	3	3	3	2	2	-	1	-	1	-	1	1

Module No	Module Contents	Hours	Cos
1	THE PV CELL: Evolution of PV cell, Characteristics and equivalent circuit, Model of PV cell, Short Circuit, Open Circuit and Peak power parameters, Data sheet study Cell efficiency, Effect of temperature, Temperature effect calculation, Fill factor, PV cell simulation, PV cell interconnection	09	CO3
2	PV DESIGN: Solar modules, Storage systems, Power conditioning and regulation, Protection, Sizing and design of PV system	09	CO1
3	MAXIMUM POWER POINT TRACKING: Concept of MPPT, algorithms, Perturb-Observe method, Incremental Conductance method,	09	CO2, CO6
4	STAND ALONE AND GRID CONNECTED PV SYSTEM: Stand –alone PV system, Configurations, Grid connected PV systems, Configuration and working of single stage grid connected PV system	09	CO5, CO6
5	APPLICATIONS OF SOLAR PV SYSTEM: Battery chargers, Domestic and Street lighting, Water pumping, Solar PV power plant, Industry applications and Telecommunications.	09	CO4

Text Books:

1. Solar Photovoltaics: Fundamentals, Technologies and Applications, Chetan Singh Solanki, Prentice-Hall of India Pvt. Limited, Third Edition edition, 2018 Reprint.
2. Applied Photovoltaics, Stuart R. Wenham, Martin A. Green, Muriel E. Watt and Richard Corkish, 2017, Earthscan, UK
3. Large Energy storage Systems Handbook, Frank S. Barnes & Jonah G. Levine, CRC Press, 2015.

Reference Books:

1. Renewable and Efficient Electric Power Systems, Gilbert M. Masters: John Wiley & Sons, 2014.
2. Photovoltaic Systems Engineering, Roger A. Messenger & Jerry Ventre: CRC Press, 2014, 2nd edition.

SIMULATION OF POWER ELECTRONICS

Course Code : 20EEE822A

Credits : 03

L: T: P :S : 3:0:0 :0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Apply mathematical skills to represent mathematically a physical system
CO2	Apply various modelling methods to develop mathematical modelling
CO3	Design and develop digital controllers to control current and voltage of a Power Electronics system
CO4	Apply modern engineering software tools such as MATLAB software to develop model for various Power Electronics circuits.
CO5	Extract information through appropriate design techniques and tools for simulation of Power Electronics based circuits published in conference/ journal papers.
CO6	Demonstrate capacity for self-management and teamwork, communicate regarding activities carried out as a part of self-study confidently and effectively, to comprehend and write effective reports and design documentation

Mapping of Course Outcomes to Program Outcomes:

BIOMEDICAL INSTRUMENTATION

Course Code : 20EEE823A

Credits : 03

L: T: P:S : 3:0:0 :0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Inculcate the knowledge about the electrodes and equivalent circuits
CO2	Illustrate origin of bio potentials and its propagations
CO3	Understand the different types of electrodes and its placement for various recordings
CO4	Design bio amplifier for various physiological recordings
CO5	Learn the different measurement techniques for non-physiological parameters.
CO6	Summarize different biochemical measurements.

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	-	-	-	1	-	-	-	1	-	-

CO4	3	2	3	2	-	2	1	-	-	-	2	2
CO5	3	1	1	1	-	1	1	1	-	-	-	2
CO6	3	1	1	1	-	2	2	-	-	-	-	-

Module	Module Contents	No Hours	COs
1	BIOPOTENTIAL ELECTRODES: Origin of bio potential and its propagation. Electrode-electrolyte interface, electrode-skin interface, half-cell potential, Contact impedance, polarization effects of electrode – non polarizable electrodes. Types of electrodes - surface, needle and micro electrodes and their equivalent circuits. Recording problems - motion artifacts, measurement with two electrodes.	9	CO1 CO2
2	BIOPOTENTIAL MEASUREMENTS: Bio signals characteristics – frequency and amplitude ranges. ECG – Einthoven’s triangle, standard 12 lead system, Principles of vector cardiography. EEG – 10-20 electrode system, unipolar, bipolar and average mode. EMG– unipolar and bipolar mode. Recording of ERG, EOG and EGG.	9	CO3
3	SIGNAL CONDITIONING CIRCUITS: Need for bio-amplifier - single ended bio-amplifier, differential bio-amplifier,	9	CO4

	Impedance matching circuit, isolation amplifiers – transformer and optical isolation - isolated DC amplifier and AC carrier amplifier., Power line interference, Right leg driven ECG amplifier, Band pass filtering		
4	MEASUREMENT OF NON-ELECTRICAL PARAMETERS: Temperature, respiration rate and pulse rate measurements. Blood Pressure: indirect methods -Auscultatory method, oscillometric method, direct methods: electronic manometer, Pressure amplifiers, Systolic, diastolic, mean detector circuit. Blood flow and cardiac output measurement: Indicator dilution, thermal dilution and dye dilution method, Electromagnetic and ultrasound blood flow measurement.	9	CO5
5	BIOCHEMICAL MEASUREMENT AND BIOSENSORS: Biochemical sensors - pH, pO ₂ and pCO ₂ , Ion selective Field effect Transistor (ISFET), Immunologically sensitive FET (IMFET), Blood glucose sensors, Blood gas analyzers - colorimeter, Sodium Potassium Analyser, spectrophotometer, blood cell counter, auto analyzer (simplified schematic description) – Bio Sensors – Principles – amperometric and voltometric techniques.	9	CO6

APPLICATIONS OF IOT IN ELECTRICAL ENGINEERING

Course Code : 20EEE824A

Credits : 03

L: T: P:S : 3:0:0:0

CIE Marks : 50

Exam Hours : 03

SEE Marks : 50

Course Outcomes: At the end of the Course, the student will be able to:

CO1	Identify the main components of Internet of Things.
CO2	Program the sensors and controller as part of IOT.
CO3	Assess different Internet of Things technologies and their applications.
CO4	Design a component or a product applying all the relevant standards and with realistic constraints.
CO5	Identify a suitable hardware and software solution for the given electrical and electronics problems.
CO6	Execute their electrical and electronics product ideas into a real-time working model.

Mapping of Course Outcomes to Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

APPENDIX A

Outcome Based Education

Outcome-based education (OBE) is an educational theory that bases each part of an educational system around goals (outcomes). By the end of the educational experience each student should have achieved the goal. There is no specified style of teaching or assessment in OBE; instead classes, opportunities, and assessments should all help students achieve the specified outcomes.

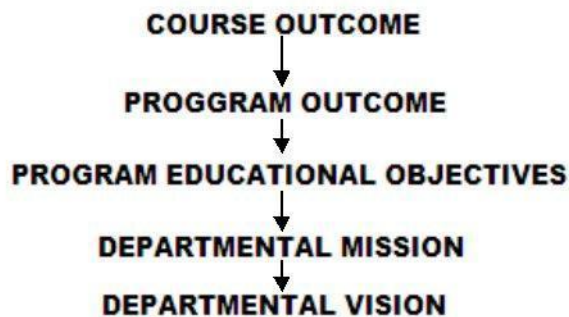

There are three educational Outcomes as defined by the National Board of Accreditation:

Program Educational Objectives: The Educational objectives of an engineering degree program are the statements that describe the expected achievements of graduate in their career and also in particular what the graduates are expected to perform and achieve during the first few years after graduation. [nbaindia.org]

Program Outcomes: What the student would demonstrate upon graduation. Graduate attributes are separately listed in Appendix C

Course Outcome: The specific outcome/s of each course/subject that is a part of the program curriculum. Each subject/course is expected to have a set of Course Outcomes

Mapping of Outcomes

APPENDIX B

The Graduate Attributes of NBA

Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Conduct investigations of complex problems: The problems that cannot be solved by straightforward application of knowledge, theories and techniques applicable to the engineering discipline. * That may not have a unique solution. For example, a design problem can be solved in many ways and lead to multiple possible solutions. Hat require consideration of appropriate constraints/requirements not explicitly given in the problem statement. (like: cost, power requirement, durability, product life, etc.). which need to be defined (modeled) within appropriate mathematical framework. that often require use of modern computational concepts and tools.#

Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent

responsibilities relevant to the professional engineering practice.

Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

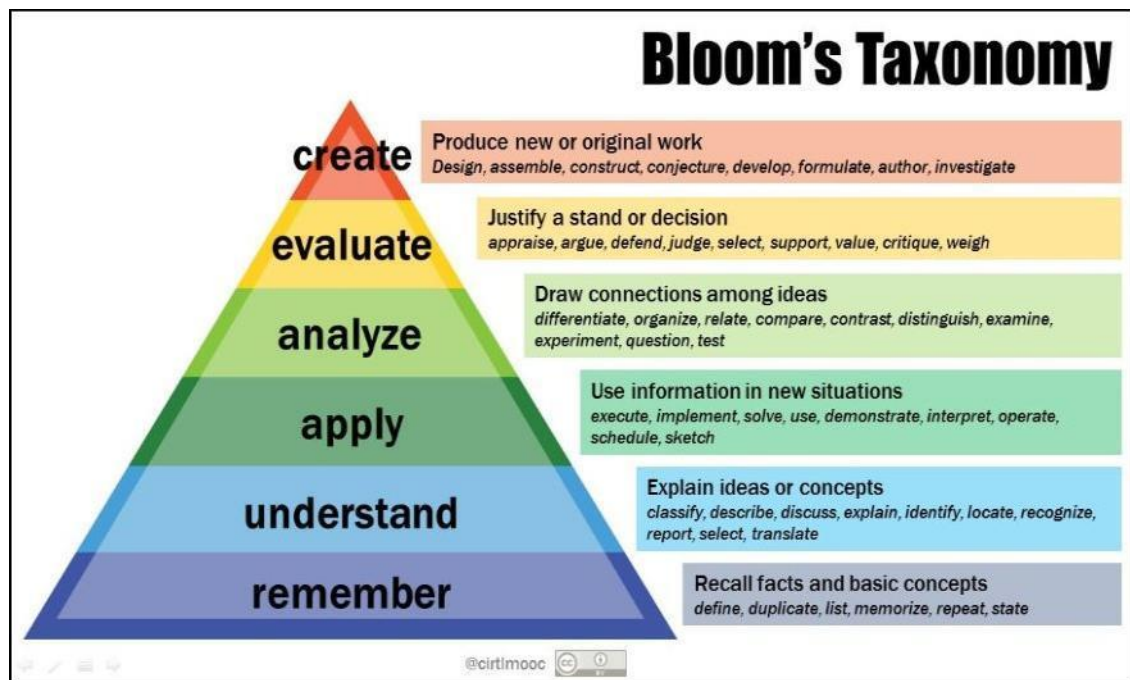

Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

APPENDIX C

BLOOM'S TAXONOMY

Bloom's taxonomy is a classification system used to define and distinguish different levels of human cognition—i.e., thinking, learning, and understanding. Educators have typically used Bloom's taxonomy to inform or guide the development of [assessments](#) (tests and other evaluations of student learning), [curriculum](#) (units, lessons, projects, and other learning activities), and instructional methods such as questioning strategies. [eduglossary.org]
