TEDx Talk Report

Matt Tilleard's talk argues that power has always belonged to whoever controlled the dominant fuel, such as coal or oil. The clean energy transition is the first one that moves to a technology instead of a new fuel. Critical minerals are needed, but most are geologically abundant and can be diversified, so no lasting cartel like opec is likely. As a result, control of energy will be shared among those who build and share technology, not held by a few resource owners. The talk shows say that the transition is also a shift in global power, making energy more distributed, competitive and secure.
